given power system networks. Course Outcomes: Formulate Y bus, Z bus for a given power system network. Solution to load flow equation for a power system network. Solution for power system network for unsymmetrical faults using symmetrical components. Power system steady state stability and transient state stability analysis UNIT-I (12 Lectures)

sis has similarities with the power flow analysis, so it is natural to put these two items in Part I of the notes. In Part II the dynamic behaviour of the power system during and after disturbances (faults) will be studied. The concept of power system stability is defined, and different types of power system instabilities are discussed.
