Librivox.org is a dream come true for audiobook lovers. All the books here are absolutely free, which is good news for those of us who have had to pony up ridiculously high fees for substandard audiobooks. Librivox has many volunteers that work to release quality recordings of classic books, all free for anyone to download. If you've been looking for a great place to find free audio books, Librivox is a good place to start.

## **passwd - Wikipedia**

`/etc/shadow` is only readable by the root user, so even the encrypted password is hidden and can't be used in a password-cracking program; Each line in `/etc/shadow` contains the user's login userid, their encrypted password, and fields relating to password expiration. Special passwords (see "man shadow"):

User or group removals, UID or GID changes, and home directory changes will be asked with high priority. User or group additions and shell changes

will be asked with medium priority. Questions about whether to move entries above the NIS compat inclusion entry or whether to change the GECOS of a user are asked at low priority. BUGS

### **shadowcase - YouTube**

/etc/shadow is used to increase the security level of passwords by restricting all but highly privileged users' access to hashed password data. Typically, that data is kept in files owned by and accessible only by the super user.

### **File permissions of the /etc/shadow password file - Linux ...**

Another form of shadow IT comes by way of OAuth connected applications, where a user authorizes access to a third-party application via a sanctioned application. For example, the user can use their Facebook credentials to log into Spotify or another 3rd party application via their corporate cloud app (Google G Suite or Microsoft Office 365).

## **Shadow users - Citrix.com**

Refactor user table into an identity table and a locally-managed password table. Migrate data from the user table to these new tables and ultimately remove the user table. Modify backend code to utilize the new tables. Shadow LDAP and federated users. Create new shadow tables for mapping LDAP and federated users to local identities.
